- ▶ If Elif Else Statements
- ▶ Nested If Statements

▶ If Statements

A simple **if statement** essentially states, if a particular test is true, then perform a specified set of actions. If it's not true, don't take those acts.

```
if [[ <some test> ]]
then
  <commands>
fi
```

```
#!/bin/bash
read -p "Input a number" number

if [[ $number -gt 50 ]]
then
  echo "The number is big."
fi
```

Output:

```
./if-statement.sh
Input a number: 55
The number is big.
```

Relational Operators

Operator	Description
-eq	equal
-ne	not equal
-gt	greater than
-lt	less than
-ge	greater than or equal
-le	less than or equal

```
#!/bin/bash
read -p "Input a number" number

if [[ $number -gt 50 ]]
then
echo "The number is big."
fi
```

String Operators

Operator	Description
=	equal
!=	not equal
-z	Empty string
-n	Not empty string

```
#!/bin/bash

if [[ "a" = "a" ]]
then
echo "They are same"
fi

if [[ "a" != "b" ]]
then
echo "They are not same"
fi

if [[ -z "" ]]
then
echo "It is empty"
fi

if [[ -n "text" ]]
then
echo "It is not empty"
fi
```

File Test Operators

Operator	Description
-d file	directory
-e file	exists
-f file	ordinary file
-r file	readable
-s file	size is > 0 bytes
-w file	writable
-x FILE	executable

```
#!/bin/bash

if [[ -d folder ]]
then
    echo "folder is a directory"
fi

if [[ -f file ]]
then
    echo "file is an ordinary file"
fi

if [[ -w file ]]
then
    echo "file is a writable file"
fi

if [[ -s file ]]
then
    echo "file is > 0 bytes"
fi
```

If Else Statements

If Else Statements execute a block of code if a statement is true, or another block of code if it is false.

Output:

```
if [[ <some test> ]]
then
    <commands>
else
    <other commands>
fi
```

```
#!/bin/bash
read -p "Input a number: " number

if [[ $number -ge 10 ]]
then
    echo "The number is bigger than or
equal to 10."
else
    echo "The number is smaller than
10"
fi
```

```
./ifelse-statement.sh
Input a number: 27
The number is bigger than or
equal to 10.
$
./ifelse-statement.sh
Input a number: 5
The number is smaller than 10
```

If Elif Else Statements

```
if [[ <some test> ]]
then
  <commands>
elif [[ <some test> ]]
then
  <different commands>
else
  <other commands>
fi
```

```
#!/bin/bash
read -p "Input a number: " number

if [[ $number -eq 10 ]]
then
  echo "The number is equal to
10."
elif [[ $number -gt 10 ]]
then
  echo "The number is bigger than
10"
else
  echo "The number is smaller than
10"
fi
```

Output:

```
./elif-statement.sh
Input a number: 15
The number is bigger than 10
$
./elif-statement.sh
Input a number: 5
The number is smaller than
10
$
./elif-statement.sh
Input a number: 10
The number is equal to 10
```

Nested If Statements

```
#!/bin/bash

read -p "Input a number: " number

if [[ $number -gt 10 ]]
then
  echo "Number is bigger than 10"

  if (( $number % 2 == 1 ))
  then
    echo "And is an odd number."
  else
    echo "And is an even number"
  fi
else
  echo "It is not bigger than 10"
fi
```

Output:

```
./nested-if-statement.sh
Input a number: 40
Number is bigger than 10
And is an even number
$
./nested-if-statement.sh
Input a number: 27
Number is bigger than 10
And is an odd number.
$
./nested-if-statement.sh
Input a number: 5
It is not bigger than 10
```

Exercise 1

1. Ask user to enter his/her **name**.
2. Ask user to enter his/her **age**.
3. Ask user **average life expectancy (ale)**.
4. Print user name with one of these messages regarding his/her **age**:
 - a. `age < 18 :`
 "Student"
 "At least **X** years to become a worker." # (**X** = 18 - age)
 - b. `18 <= age < 65 :`
 "Worker"
 "**X** years to retire." # (**X** = 65 - age)
 - c. `age >= 65 :`
 if age less than **ale**:
 "Retired"
 "**X** years to die." # (**X** = ale - age)
 else:
 # beep sound # echo -ne '\007'
 "!!! Already died !!!"
 # wait 1 sec.
 "!!! Already died !!!"
 # wait 2 secs.
 "!!! Already died !!!"

Students, write your response!
